Relatório do Projeto Mensal 1

Vitor Eduardo Lopes Francisco ; Gustavo Ariel Gamarra Rojas

1. Introdução

Este projeto tem como objetivo configurar uma rede corporativa utilizando os protocolos de roteamento **RIPv2** e **OSPF**, com redistribuição de rotas entre eles. A rede foi segmentada em VLANs, e serviços como DHCP, DNS, Web e E-mail foram implementados para garantir a funcionalidade completa da rede.

2. Topologia da Rede

A rede é composta por 7 roteadores e 1 switch, organizados em dois domínios de roteamento:

- Domínio RIPv2: Foz, Guaíra, Cascavel.
- Domínio OSPF: Maringá, Londrina, Guarapuava, Curitiba, Cascavel.

O roteador **Cascavel** é responsável pela redistribuição de rotas entre os dois protocolos. O switch é configurado com VLANs para segmentação de tráfego.

3. Plano de Endereçamento IP

O endereçamento IP foi estruturado utilizando VLSM (Variable Length Subnet Masking) para otimizar o uso dos endereços.

4. Configurações dos Dispositivos
